

Fabreeka® Isolates DEA Bravo CMM at Chrysler

Chrysler Stamping in Michigan was installing a DEA Bravo 4308 Dual Horizontal Arm CMM and called upon Fabreeka® to isolate the machine from shock and vibration in the surrounding plant.

A rigid support foundation in an integral part of the Bravo machine. This structure is designed and built to DEA dynamic deflection specifications for minimum dynamic deflection.

Twelve isolators isolate the CMM and support foundation. Each isolator has a 25,500 lb capacity and the system has a natural frequency of 2.5 Hz.

Please contact Fabreeka® with any questions or to discuss your application.
