

Fabcel[®] - Custom Transformer Mounts

For decades, Fabreeka's[®] Fabcel[®] pads have been used as mounts to control structure-borne vibration and noise generated from engines, transformers and other vibrating equipment. The Fabcel mounts are custom-engineered to the specific application, combining multiple layers of Fabcel, Fabreeka, steel and other materials to provide a tailored mount for any purpose.

Fabcel is placed on a foundation.

The transformer is lowered onto the Fabcel.

Fabcel pads are also used to support reactors.

Fabcel mounts prior to installation.
