

Vibration Isolation Tables

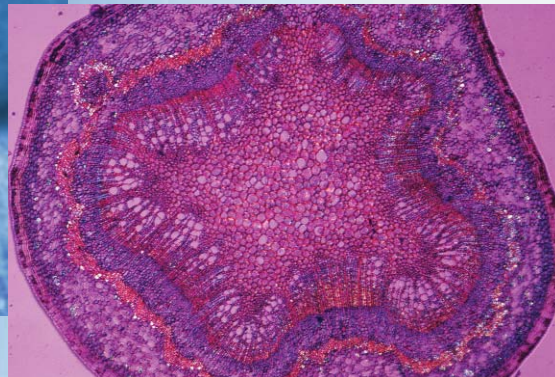

For Laboratory Biomedical Research

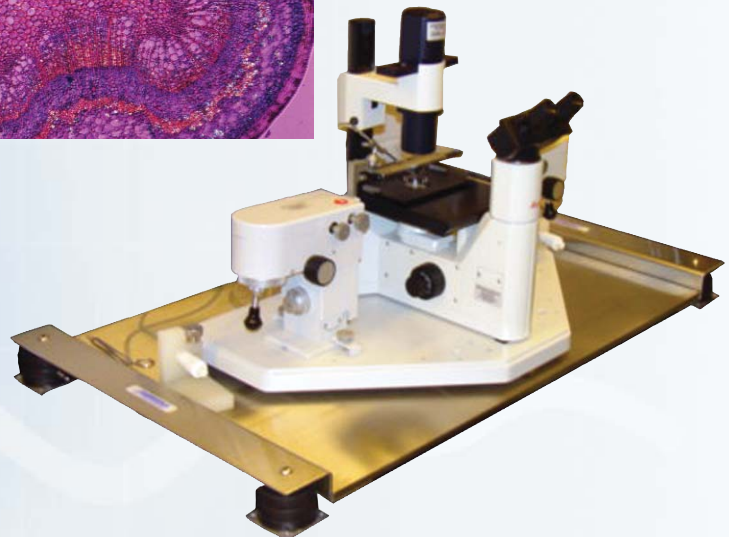

- **Cell Biology**
 - Cell Injection
 - Cell Manipulation
 - In Vitro Fertilization (IVF)

- **Neuroscience**
 - Electrophysiology
 - Patch Clamping
 - Neuro Analysis

- **Microscopy**
 - Video/Optical
 - Atomic Force
 - Scanning Probe
 - Electron

Fabreeka International provides vibration isolation workstations and platforms for supporting bio-medical and bio-physical research. Our tables and systems are used by electrophysiologists, microbiologists and microscopists in hospitals and universities worldwide.

A standard range of sizes and work surfaces are available. Work surfaces include stainless steel and stainless steel with sealed-mounting holes. Both surfaces are manufactured using a highly damped epoxy to eliminate ringing and improve isolation. For specifications and details, please contact one of our worldwide facilities listed below.

Faraday Cages

For electrophysiologists performing neurological and patch clamping work, Faraday cages shield 60 Hz (50 Hz) unwanted electromagnetic interference (EMI) radiating from lab instrument sources. Design features include easily removable panels, cable access holes, a 48 inch (1219 mm) height and a 30 x 30 copper wire mesh.

Accessories

- Casters
- Arm rest pads
- Sliding shelves
- Front/rear lean bars
- Ultra-quiet compressor
- Fixed equipment shelves

The cages are shipped completely assembled, or flat-packed for easy assembly, and are secured to the table using front and rear lean bars. Alternately, the cages may be floor mounted. Fabreeka supplies cages and light-proof enclosures to integrate with custom or existing applications.
