Fabreeka International Expands Fabreeka-TIM[®] Thermal Break Product Line

Boston, MA-USA – Fabreeka International is pleased to introduce a new light load structural thermal break, Fabreeka-TIM[®] RF series, to provide additional options to enhance our Fabreeka-TIM[®] product line. Fabreeka-TIM[®] RF is a high density, closed cell rigid polyurethane foam used as an effective thermal break for a variety of building envelope and cold storage applications.

Thermal energy will be greatly reduced by incorporating Fabreeka-TIM[®] RF into steel and concrete connections, such as structural column bases, roof equipment/dunnage post support blocks and foundation connections. For optimal thermal break performance, the area around the fastener hardware should be taken into consideration. In addition to the Fabreeka-TIM[®] RF block, we recommend incorporating Fabreeka-TIM[®] thermal break washers and bushings made from Fabreeka[®] material.

Made in the USA, Fabreeka-TIM[®] RF is manufactured in several densities to support a range of load conditions. For fast delivery, it is stocked in several thicknesses, including 1/2", 1" and 2", and can be bonded to 10" thick to meet your requirements. Fabreeka utilizes a water jet machine for precise cutting to your specifications, including anchor bolt holes.

Please contact us or visit our website for more information or to request a quote for your upcoming project.
